

Introduction

The USB-2068-18 is an 8-ch Form C relay output and 10-ch digital input module with the USB interface. All digital input channels can be used as 32-bit counters. In addition, the digital input channels can be selected as sink/source type and dry/wet contact via wire connections. There are also options for configuring power-on and safe values. 8 kV ESD protection(for all channels) and 3750 VDC intramodule isolation(for digital input channels) are also provided to enhance noise protection capabilities in industrial environments. Compare with traditional PC I/O card, it is waste of time to open chassis and configure I/O board. In ICP DAS USB I/O, you will enjoy the simply controlling I/O in the efficient way. ICP DAS USB I/O equips USB bus powered feature, one cable to access I/O and provide power without additional power wiring.

The USB I/O utility can help users to configure and control USB-2068-18 quickly and easily without programming; In addition, we also provide the friendly API library and demos for users to develop own USB application with various application development tools (VB/C++/ C#.NET/VB.NET). Therefore, the USB-2068-18 is the perfect way to add control capability to any USB capable computer.
